**What's iGOG ?**

*iGOG is an iPhone massive multisampled drum machine unlike any you've seen. Borrowing technology from Drumagog, award winning drum replacer, iGOG features up to 384 multisampled drum hits per pad! It combines dynamic, random and positional samples to form a drum sound so realistic, you'd swear it was the real thing.*

*Features:*

- 8 velocity sensitive drum pads using patent pending VelAUcity technology
- Load your own kits using standard wav, aif or Drumagog .gog files
- Hi-hat and Ride pads change articulation as you slide across the pads
- Built-in sequencer with standard midi file support
- MIDI export: save your sequences to your computer
- Sequencer features quantize, metronome, time signature, count-in, tempo and loop
- Backing track mode lets you play and record sequences in perfect sync to an mp3 file
- Mic trigger mode lets you play drums by tapping on objects, such as a table
- Built-in file transfer mode allows you to copy files between iGOG and your computer
- Mixdown feature lets you create an audio mix of your sequence

MoReVoX has developed the Free Kits included in the iGOG program.

All the MoReVoX's Drums Libraries ( Elektromorph I & II , Drivedrums, Pocketslam01 Acoustic) have been optimized for iGOG and arranged in single Kits.

The Single Kits ( Ten for each lib ) may be purchased directly throught the built-in iGOG Store !

***AVAILABLE FOR DOWNLOAD through the iGOG built-in Store***
