MoReVox MULTIDRIVE

AGGRESSIVE DRUM SAMPLES LIBRARY

About MoReVoX DriveDrums v2 Multidrive™

Distortion is the heartbeat of an exciting sound.

MoReVoX DRIVEDRUMS was created by infusing drum samples with character through a wide range of distortion devices. From vacuum tubes and analog tapes to preamps and custom distortion chains, each sound was crafted with care, ranging from subtle coloration to aggressive, in-your-face saturation.

MoReVoX DRIVEDRUMS delivers rich, fat, and natural acoustic sounds that fit seamlessly into any music genre. Every sample has been tested in real-world mixes and carefully optimized for both re-triggering and standalone use.

The collection is divided into two distinct categories:

- **Drive Samples**: These feature classic harmonic distortion, offering **warmth and smooth character**: think gentle tape compression and subtle tube saturation.
- Over Samples: These push the limits, delivering bold, gritty, and intense textures.
 Developed using analog tape saturation, heavy tube compression, console preamps, distortion pedals, they offer maximum impact and depth.

What's New in v2 Multidrive™?

With **Drivedrums v2**, MoReVoX introduces a powerful new concept: **Multidrive™**.

Designed to take full advantage of multi-slot drum replacers like **Drumagog 5** and **Trigger2**,

Drivedrums v2 offers **three additional distortion "colors"** that can be blended directly within your plugin's mixer.

These tonal variations go far beyond simple EQ. The original drum sounds were **split into distinct frequency ranges**, and for each range, **new samples were built from scratch**. These were then carefully processed through **high-end analog distortion chains**, including vacuum tubes, tape saturation, and boutique gear, to create rich and unique distortion layers.

The result? A flexible system where you can **blend multiple layers of distortion** with your main drum sample, dial in just the right amount of warmth, crunch, or aggression to suit any mix. Whether you're aiming for subtle saturation or full-on drive, Multidrive puts the control in your hands.

Tone Controls Overview

Each program file includes **three macro tone controls** designed to dramatically shape and enhance your sound:

I – FATNESS

Frequency Range: Low to Mid-Low (up to 400 Hz)

Enhances sub-harmonics and low-end body, adding warmth, firmness, and contour. Think of it as the analog tape effect—smooth, rounded, and subtly saturated.

II – RICHNESS / ATTACK

Frequency Range: 600 Hz - 3 kHz

Adds presence and punch. This control delivers the rich harmonic texture of high-end tube gear, boosting detail and front-end clarity with musical, controlled saturation.

III – TOP DEFINITION

Frequency Range: High (from 8 kHz and up)

Introduces airy brilliance and sparkle. It enhances the clarity and articulation of high frequencies without harshness.

More Than EQ

This is **not** a modeled EQ emulator, **Multidrive**[™] is a powerful sound-shaping engine based on the *real-world dynamic behavior* of professional analog hardware.

It's not just a fast and intuitive way to rebalance drum tones, it's also a creative powerhouse capable of generating **entirely new and inspiring sounds**.

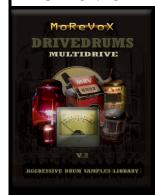

MoReVoX DriveDrums Multidrive™ - Tech Specs

Instruments Number: 124 GOGs – 117 Trigger Multi Presets – 468 Trigger Single Presets

Samples Number: **3200**Layers number: From **1** to **16**Samples for Layers: From **1** to **4**Formats: Drumagog5, Slate Trigger2
